

# Instructions for Learners Upgrading from a Previous Course Version

---

 [coursera.org/learn/writing-running-fixing-code/supplement/78n6h/instructions-for-learners-upgrading-from-a-previous-course-version](https://coursera.org/learn/writing-running-fixing-code/supplement/78n6h/instructions-for-learners-upgrading-from-a-previous-course-version)

If you are **NOT** a learner who began this course in a previous version, then you may disregard these instructions and continue with the first assignment.

However, if you upgraded to this new version then there are a few steps you need to take to resume where you left off in the previous version. You should have downloaded your files from the previous Practice Programming Environment before upgrading to this course version. If you did not download your files, then unfortunately you will need to start over with the first assignment.

With your home archive ready, open the first assignment, and after it finishes loading click the '**Browse**' or '**Choose Files**' button (depending on your browser) to the lower right of your terminal. Select your home archive ZIP file, and then click the yellow **Upload Home Archive** button. When the upload completes, you should add all your files to Git, push, and then run the grader on all assignments you have completed, using these steps:

```
$ cd ~/learn2prog $ git add . $ git commit -m "Initial commit for Course 2" $ git push $  
grade 00_hello $ grade 01_apple $ grade 02_code1 ... [repeat grade command for each  
assignment you have completed]
```

The above commands will submit grades for the assignments you completed and have you ready to resume your progress. You can then exit the PPE and move on to the next course item you need to complete.
