Committing Basics Exercise

1. Create a new folder called `Shopping`

2. Initialize a new git repo inside of the `Shopping` folder (make sure you're not already inside of a Git repo!)

3. Make a new file called `yard.txt`

4. Make another new file called `groceries.txt`

5. Make a commit that includes both empty files. The message should be "create yard and groceries lists"

6. In the `yard.txt` file, add the following changes:

```
    - 2 bags of potting soil - 1 bag of worm castings
```

7. In the `groceries.txt` file, add the following:

```
    - 4 tomatoes - 6 shallots - 1 fennel bulb
```

8. Make a new commit, including **ONLY the changes from the** `groceries.txt` **file.** The commit message should be "add ingredients for tomato soup"

9. Make a second commit including **ONLY the changes to the** `yard.txt` **file.** It should have the commit message "add items needed for garden box"

10. Next up, add the following line to the end of `groceries.txt`

```
- couple of seed potatos
```

11. In the `yard.txt` file, change the first line so that it says "**3** bags of potting soil" instead of "2 bags of potting soil"

```
- 3 bags of potting soil - 1 bag of worm castings
```

12. **Make a commit that includes the changes to BOTH files.** The message should read "add items needed to grow potatoes"

13. **Use a Git command to display a list of the commits. You should see 4!**
